

Latin America and the Caribbean

LATIN AMERICA AND THE CARIBBEAN

Latin America and the Caribbean is one of the most diverse and culturally rich regions in the world, but it also faces numerous environmental and social challenges. The impacts of climate change, biodiversity loss, and deforestation are being felt throughout the region, while issues such as poverty, inequality, and social exclusion remain significant concerns.

These challenges require urgent action, and the International Conference and Festival POP Latin America and the Caribbean, which will take place from May 22nd to 26th, 2023, is an important step in addressing them. By bringing together a wide range of stakeholders, including individuals, communities, NGOs, academia, businesses, and government institutions, the festival provides a platform for collaboration and innovation. By sharing knowledge and best practices and working together to find solutions, we can create a sustainable and equitable future for the region. Throughout the festival, we will explore a variety of important topics, including ancestral wisdom, climate change, biodiversity, energy, education, and activism. Our expert and youth roundtables will provide a platform for meaningful debates and the exchange of ideas.

In addition to our expert-led discussions, the festival will also showcase inspiring projects and initiatives that are making a real impact in the fight against climate change. These presentations will take place at the end of each day and provide an opportunity for attendees to learn about new initiatives, get involved, and make a positive difference in their communities.

We invite you to be part of this powerful and impactful event. By joining forces and working together, we can create a brighter future for ourselves, our communities, and our planet.

Don't miss this opportunity to be part of the solution!

You can access our social networks, website, donate or join POP through the QR Code:

13:00 - 14:30	Projects	Projects	Projects	Projects	Projects
14:30 - 15:30	Panel of the academy	Panel of the Academia	Panel of the Academia	Panel of the Academy	Panel of the academy
15:30 - 15:50					Ceremony of closure

Activities:

- Recycling competition within schools/universities.
- School/University Food Collection for Human Shelters and Animal Shelters.
- Elimination of emails to decrease the carbon footprint.
- Reforestation in at least 3 locations.

Expected results:

- The audience will get updated information from specialists on the topic of each day.
- The audience will gain a focus on how young people perceive and experience such issues.
- Through the proposed activities, we will reduce Municipal Solid Waste pollution and CO2 emissions, increase CO2 sequestration, and collect food for the needy.
- The projects presented will be supported by Protect Our Planet Movement.
- The Latin America and the Caribbean network will be created to facilitate synergies, partnership, and coparticipatory actions.

Ancestral Wisdom

The ancestral wisdom of Latin America and the Caribbean is an inexhaustible source of knowledge and practices that have been passed down from generation to generation by indigenous peoples and local communities. These knowledge and practices, rooted in a deep connection with nature and living in harmony with the environment, hold immeasurable value in the pursuit of sustainable and equitable solutions to the challenges we face today.

In the thematic axis of "Ancestral Wisdom" at the International Conference and Festival POP Latin America and the Caribbean, we aim to rescue, value, and disseminate this cultural heritage. Through talks, workshops, and roundtable discussions, experts in anthropology, ethnobotany, ecology, history, and other disciplines will come together to explore how ancestral wisdom can illuminate our path towards a sustainable and resilient future.

We will address topics such as natural resource management, biodiversity conservation, climate change mitigation, sustainable agriculture, and water management, among others. We will also examine how the worldview of indigenous peoples and local communities can help us rethink our approach to education, social justice, and inclusion.

Finally, in this thematic axis, we will foster intercultural and intergenerational dialogue, highlighting the importance of collaboration and mutual respect. Young leaders and activists will share their experiences and perspectives, enriching the discussion and strengthening our collective capacity to face the challenges of the 21st century.

We invite you to immerse yourself in the vast knowledge and cultural richness offered by the ancestral wisdom of Latin America and the Caribbean, and to join us on this journey towards a more sustainable and equitable future for all.

Climate Change

Climate change is one of the most pressing and complex challenges facing humanity in the 21st century. Latin America and the Caribbean are especially vulnerable to the adverse effects of climate change, such as sea-level rise, extreme weather events, and ecosystem loss. Moreover, these environmental impacts have profound social and economic consequences, exacerbating poverty, inequality, and social exclusion.

In the thematic axis of "Climate Change" at the International Conference and Festival POP Latin America and the Caribbean, we will address this critical issue from multiple perspectives and disciplines. Our goal is to foster understanding, dialogue, and collaboration around the causes, impacts, and solutions to climate change in the region.

During this thematic axis, experts in climatology, meteorology, oceanography, social sciences, and public policy will come together to analyze and debate key topics such as greenhouse gas emissions mitigation, adaptation and resilience to climate impacts, and the transition to a low-carbon economy. Additionally, the challenges and opportunities faced by governments, businesses, and communities in implementing climate policies and action strategies will be discussed.

Young climate leaders and activists will also be given a voice, sharing their experiences, concerns, and innovative solutions to address climate change in their communities and countries. Their energy and commitment are crucial in driving change and ensuring a more sustainable and equitable future.

We invite you to join this thematic axis and actively participate in the exchange of knowledge, ideas, and solutions. Together, we can confront this global challenge and forge a path towards a safer, prosperous, and resilient future for Latin America and the Caribbean.

Biodiversity

Biodiversity, which refers to the variety of life on Earth, is fundamental to the health and well-being of our planet and its inhabitants. Latin America and the Caribbean are home to an exceptional wealth of species and ecosystems, making the region one of the most biodiverse places in the world. However, this natural richness is threatened by factors such as deforestation, habitat degradation, pollution, resource overexploitation, and climate change.

In the thematic axis of "Biodiversity" at the International Conference and Festival POP Latin America and the Caribbean, we will explore the importance of conserving and protecting our biodiversity and how to address the challenges it faces. We will discuss strategies and solutions for preserving ecosystems and promoting the sustainable use of natural resources, highlighting the need for an integrated and cooperative approach.

We will bring together experts in ecology, biology, conservation, and public policy, as well as representatives from local communities and civil society organizations, to share their knowledge and experiences in biodiversity protection in the region. Additionally, we will foster dialogue across generations, with the participation of young leaders and activists working on innovative grassroots projects to safeguard biodiversity and the integrity of our ecosystems.

We will also address how biodiversity and the ancestral wisdom of indigenous peoples and local communities are interconnected, and how this relationship can contribute to the conservation and sustainable use of our natural wealth.

We invite you to join this thematic axis and be part of the collective effort to protect and value the natural heritage of Latin America and the Caribbean. Together, we can ensure a prosperous and sustainable future for our communities and the planet.

Renewable Energy

Renewable energies, such as solar, wind, hydro, geothermal and biomass, play a crucial role in the transition to a more sustainable, low-carbon future. Latin America and the Caribbean have great potential for harnessing these clean energy sources and the region can become a world leader in their implementation.

In the thematic axis of "Renewable Energies" at the International Conference and Festival POP Latin America and the Caribbean, we will focus on the importance of increasing the participation of these energy sources in our energy mix, as well as the strategies and policies to promote their adoption at the regional level. We will explore technological advancements, innovative solutions, and emerging business models that can help accelerate the transition to a cleaner and more resilient energy system.

We will bring together experts in engineering, technology, energy policy, and economics, as well as industry leaders, entrepreneurs, and representatives of communities affected by climate change and pollution, to share their knowledge and experiences in the development and promotion of renewable energies. Additionally, we will promote intergenerational exchange, involving young professionals and activists committed to transforming the energy sector in the region.

We will also discuss how renewable energies can drive sustainable socio-economic development, foster green job creation, and improve the quality of life in our communities, particularly in rural and marginalized areas.

We invite you to join us in this thematic axis of "Renewable Energies" and be part of the collective effort to drive a just and sustainable energy transition in Latin America and the Caribbean. Together, we can lay the foundation for a cleaner, safer, and more prosperous energy future for all.

Education and Youth

Education is a fundamental driver for sustainable development, social equity, and the building of a more prosperous future. Additionally, youth represent a vital force in the fight against the environmental and social challenges facing our region. In the thematic axis of "Education and Youth" at the International Conference and Festival POP Latin America and the Caribbean, we will focus on empowering the new generations through quality education and tools that enable them to become agents of change in their communities and the world.

We will explore innovative strategies and approaches in teaching and learning, as well as the importance of environmental education, inclusion, and equity in the education system. Furthermore, we will analyze how to strengthen collaboration among educational institutions, the private sector, civil society organizations, and governments to ensure relevant and effective education in the context of current challenges.

We will bring together educators, researchers, community leaders, youth activists, and representatives from international organizations to share their knowledge, experiences, and best practices in promoting transformative and quality education. We will also highlight innovative educational projects and initiatives that are driving social and environmental change in the region.

In this thematic axis, we will also celebrate and support the commitment and participation of youth in the pursuit of sustainable and equitable solutions. We will foster intergenerational dialogue and the creation of networks of young leaders who share ideas, experiences, and dreams of a better future.

We invite you to join us in this thematic axis and be part of the collective effort to transform education and empower youth in Latin America and the Caribbean. Together, we can lay the foundation for a more just, sustainable, and opportunity-filled future for the new generations.
